**Bootcamp
& Hackathon**
1st Edition

ACM ALEXANDRIA STUDENT CHAPTER PRESENTS

Agentic AI Hackathon

A one-day build sprint where teams turn an idea into a working product using AI coding agents – start with a blank page, leave with something real.

LOCATION

[EnterPerform Hub, Alexandria](#)

TIME

2:00 PM – 7:00 PM

TEAM SIZE

Teams of 3

4th member? [Contact us](#)

◆ THE THEME: HACK YOUR STARTUP, CO-FOUNDING WITH CLAUDE CODE

This hackathon's theme is building a startup with an AI agent as your co-founder. Take the idea sitting in your notes app and turn it into something real – in a single day, with Claude Code doing the heavy lifting alongside you.

The startup idea itself is open – pick whatever you want to build – and we're especially excited to see products built for the Egyptian and MENA market. By the end of the day, the goal is to say "we built a real product, for a real user, that you can use right now" – not a slide deck, not a roadmap.

THE ONE RULE THAT MATTERS: every project should target a specific, real user. Know who they are and what they do today instead of your product. Presentations should open by introducing that person, then show the product working live – no slide-only pitches.

SCHEDULE FOR THE DAY

- 1 20 minutes – Introduction**
Welcome, theme walkthrough, rules, and team check-in.
- 2 4 hours – Building**
Heads-down build time with mentors roaming the room to help.
- 3 2 minutes per team – Presentations**
Each team gets a tight 2-minute live demo slot – make it count.
- 4 Closing & Prizes**
Judging wrap-up, winners announced, and prize handout.

GUIDELINES

Rules, Conduct & Judging

♥ CODE OF CONDUCT (based on MLH standards)

- ♦ **Treat everyone with respect.** Harassment of any kind won't be tolerated, no exceptions.
- ♦ **Be inclusive.** Welcome people of all backgrounds and experience levels.
- ♦ **No plagiarism.** Don't submit someone else's project as your own.
- ♦ If something feels wrong, tell an organizer immediately.

👥 TEAM RULES

- ♦ Teams of 3 people. Need a 4th member? Contact the organizers.
- ♦ No team yet? Organizers will help you find one at the start.
- ♦ All code must be written during the hackathon – pre-built projects aren't eligible.
- ♦ Using AI tools (Claude Code, ChatGPT, etc.) is expected and encouraged – that's the whole point.
- ♦ Open-source libraries and public APIs are fine to use as building blocks.

⚙️ PROJECT RULES

- ♦ Must have a working demo by the deadline – no exceptions for "almost done."
- ♦ Keep your API key private. Don't commit it to GitHub or share it outside your team.
- ♦ If you hit your team's AI credit limit, flag an organizer – don't panic.

🏆 JUDGING

Each team gets a short pitch slot: problem, live demo, what you'd do with more time. Working beats ambitious – a small thing that runs beats a big thing that doesn't.

CATEGORY	KEY ATTRIBUTE	SCORE
Idea	Did the proposal address the problem statement and theme?	/ 10
Idea	Was the idea innovative?	/ 10
Implementation	Does the solution work? Did the team achieve what they wanted?	/ 10
Implementation	How technically challenging/impressive was the implementation?	/ 10
Design	Did the team put thought into UX? How well designed is the interface?	/ 10
Presentation	Does the presentation clearly define and address the problem?	/ 10
TOTAL		/ 60

BEFORE YOU BUILD

API Access & Computer Setup

🔑 CLAUDE CODE API KEY

We will send each team its Claude Code API key by email before the hackathon – this is how you'll access Claude Code for the build. Check your inbox (and spam folder) ahead of the event so you're ready to go on the day. Keep it private: don't commit it to GitHub or share it outside your team.

⚡ SAVE YOUR TOKENS

Tokens are **limited**, so plan your usage. We encourage teams to use **any free agent or LLM** for scaffolding, boilerplate, and exploratory work, and save **Claude Code for the intensive, demanding tasks** where it matters most. If you hit your team's AI credit limit, flag an organizer – don't panic.

⚙️ SETTING UP YOUR COMPUTER

1. Install an IDE (skip if you already have one)

An IDE is just the app you write code in. We recommend VS Code – free, and works on Mac, Windows, and Linux. Go to code.visualstudio.com, click Download, run the installer. Open it once installed – no setup needed. VS Code has a built-in terminal too: Terminal menu → New Terminal.

2. Install Claude Code

MAC / LINUX

```
curl -fsSL https://claude.ai/install.sh | bash
```

WINDOWS

```
irm https://claude.ai/install.ps1 | iex
```

3. Set your team's API key

Organizers will give you a key. Use either method, not both:

OPTION A – .env FILE (recommended)

```
ANTHROPIC_API_KEY=your-team-key-here
```

OPTION B – TERMINAL EXPORT

```
export ANTHROPIC_API_KEY="your-team-key-here"
# Windows PowerShell:
$env:ANTHROPIC_API_KEY="your-team-key-here"
```

4. Verify and run

```
claude --version
cd your-project-folder
claude
```

If a version number printed, you're set. Then describe what you want built, in plain English.

LET'S GO

Getting Started

GETTING STARTED

- 1 Form your team, pick an idea, keep it small enough to demo in 2 minutes.
- 2 Set up your IDE and Claude Code with your team's key.
- 3 Start with one clear first prompt, not the whole app at once. Small steps, review each diff, commit as you go.
- 4 Test constantly. If something breaks, paste the error back to Claude and ask it to fix it.
- 5 Save time at the end for your pitch – don't code until the last minute.

New to tracking your Claude Code token usage?

Watch this before the day starts: https://www.youtube.com/watch?v=TF9ThEuPT_s

PLEASE ARRIVE ON TIME

Doors open promptly at 2:00 PM. The introduction and rules briefing happen in the first 20 minutes only – arriving late means missing key details for the day.
